Note: "Other" includes emergency contraception, syringes and accessories, standard days method, and trocars. Condom values have been adjusted to exclude condoms procured for HIV programs. For USAID, an assumption was made that 75% of condoms were procured for HIV programs (based on reporting from GHSC-PSM)

## Estimating the Comparative Value of USAID's Contraceptive Procurement

### Total USD Value of Donor-Funded Contraceptive Products Procured, by Funder, 2020-2024

	2020	2021	2022	2023	2024
<b>UNFPA Supplies</b>	\$1,391,004	\$3,378,926	\$1,169,701	\$3,560,019	\$1,811,994

Note: Values are only for the commodities and do not include estimates of the shipping and associated costs to get those products to the country. Values exclude personal lubricants. Condom values have been adjusted to exclude condoms procured for HIV programs. For USAID, an assumption was made that 75% of condoms were procured for HIV programs (based on reporting from GHSC-PSM) and for Global Fund, an assumption was made that 100% of condoms were procured for HIV.

## Estimating the Impacts of Donor-Funded Contraceptives and USAID's Contribution

### Estimated Impacts of Contraceptive Products Procured in 2024

	Impacts of Total Commodities (all funders)	Impacts of USAID-funded Commodities only	Impacts of Total Commodities <u>without</u> USAID-funded Commodities	% of Total Impact that came from USAID
<b>Demographic impacts</b>				
<i>Unintended pregnancies averted</i>	534,300	214,700	319,600	40%
<i>Live births averted</i>	274,100	110,100	164,000	40%
<i>Abortions averted</i>	184,700	74,200	110,500	40%
<b>Health impacts</b>				
<i>Maternal deaths averted</i>	1,510	613	897	41%
<i>Child deaths averted*</i>	15,870	6,380	9,490	40%
<i>Unsafe abortions averted</i>	156,590	62,920	93,670	40%
<b>Couple Years of Protection (CYPs)</b>				
<i>Total CYPs (FP only)</i>	1,157,588	512,471	645,117	44%

Notes: Impact estimates are Service-Lifespan impacts based on default Impact2 Model values; RH Viz does not specify implant or injectable type, so implant procurement was split evenly into 5-year and 3-year implants, and injectables were assumed to be 3-month injectables; 2025 commitments (in terms of \$ or products) not available, so 2024 is a proxy to estimate the impact of USAID funded FP commodity procurement

\* Estimates of child deaths averted may be unreliable because there is currently very limited data about the linkages between CPR, birth spacing and child mortality. This part of Impact 2 will be updated as improved research becomes available.
